DETAILED ACTION

1. Claims 1-8 are allowed.

2. The following is an examiner's statement of reasons for allowance: Vidovic (US Pat. 4,254,483) discloses an ultrasonic intrusion alarm system comprising a processor 12 (control panel) connected to a plurality of ultrasonic transmitting heads 16 via cable 20. The processor processes signals for the receiving heads to actuate the annunciator in response to the disturbance or the tampering that is detected on the system and the cable 20 (col. 2, lines 56-68; col. 3, lines 1-32; col. 5, lines 1-54). Tice (US Pat. 5,440,293) discloses a detector supervision comprising a control panel 12, which transmits electrical energy, information and commands to, and receives information from a plurality of detector units 16 by means of a two conductor communication cable 18 (col. 2, lines 57-62). A second component 28b of the end-of-line circuit 28 is a detector circuit, which is capable of detecting a change in voltage across the lines 18, due to the current pulses from the oscillator 28a. The change in voltage is dependent on the presence or absence of the detector heads, such as the detector head 28 on the respective bases (col. 3, lines 54-60). Although Vidovic discloses a system that includes a cable connected to a control panel and to event detectors with several circuits used to detect tampering, and Tice discloses a two conductor communication cable in communication with a control panel and a plurality of detectors, neither of the above references nor any or the prior art of record disclose in their entirety the claimed alarm system comprising a cable between an alarm panel and an event sensor, the cable comprising only two conductors, and circuitry associated with the conductors, for providing current to the event sensor and detecting changes in the current to indicate tampering at the sensor, severing of the cable and an event detected by the sensor.
